FEBRUARY KEY POINTS

TREND ESTIMATES

EMPLOYMENT

• increased to 9,258,600.

UNEMPLOYMENT

decreased to 670,200.

UNEMPLOYMENT RATE

decreased marginally to 6.7%.

PARTICIPATION RATE

• increased slightly to 63.9%.

SEASONALLY ADJUSTED ESTIMATES

EMPLOYMENT

• increased by 20,400 to 9,283,100. Full-time employment decreased by 22,800 to 6,664,100 while part-time employment increased by 43,300 to 2,619,000.

UNEMPLOYMENT

 decreased by 40,000 to 652,500. The number of persons looking for full-time work fell by 16,900 to 501,600 and the number of persons looking for part-time work fell by 23,000 to 150,900.

UNEMPLOYMENT RATE

- decreased by 0.4 percentage points to 6.6%. The male rate fell by 0.2 percentage points to 6.9%, while the female rate fell by 0.7 percentage points to 6.2%.
- NSW 5.8% (6.4% last month), Vic 6.3% (6.6%), Qld 8.0% (8.1%), SA 7.2% (7.1%), WA 6.3% (7.0%), Tas 8.6% (9.0%).

PARTICIPATION RATE

decreased by 0.2 percentage points to 63.9%.

CHANGES THIS MONTH

Seasonally adjusted and trend estimates have been revised from February 1978 to reflect the annual reanalysis of seasonal factors, which occurs in February each year. A feature article outlining the seasonal reanalysis will appear in the February 2002 edition of *Labour Force*, *Australia* (Cat. no. 6203.0). Further information can be obtained from the contact listed on the front page of this publication.

Evolving seasonal patterns cause revisions to seasonal factors. More frequent than annual reanalyses would mean that the seasonal factors would stabilise sooner. This option will be discussed with users in the months ahead. Also, investigations are continuing into recent indications that variations in the start date of Labour Force Survey interviewing (particularly during the month of January) may have a slight impact on seasonal patterns in the data. If it proves sensible and feasible, a correction for this effect may be incorporated in future seasonal reanalyses.

SAMPLING ERRORS

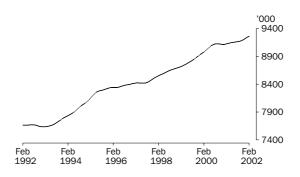

The estimates in this publication are based on a sample survey. Because the entire population is not enumerated, the published estimates and the movements derived from them are subject to sampling variability. Standard errors give a measure of this variability and appear on pages 31 and 32.

The 95% confidence intervals below provide another way of looking at the variability inherent in estimates from sample surveys. The interval bounded by the two limits is the 95% confidence interval. A 95% confidence interval indicates that we are 95% confident that the upper and lower limits enclose the true value of the estimate.

SEASONALLY ADJUSTED	MOVEMENTS	MOVEMENTS									
DATA SERIES	JANUARY 2002 TO FEE	JANUARY 2002 TO FEBRUARY 2002									
	Monthly change	interval									
Total employment	20 400	-16 000	to	56 800

Participation rate	-0.2 pts	-0.4 pts	to	0.0 pts							

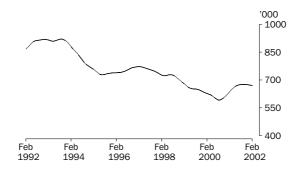

Barbara Dunlop Acting Australian Statistician EMPLOYED PERSONS

The trend estimate of employed persons rose strongly from a low of 7,634,000 in January 1993 until mid 1995. The trend then continued to rise at a slower rate until June 1997, before showing stronger growth to reach 9,126,300 in September 2000. Since then the trend has increased to stand at 9,258,600 in February 2002.

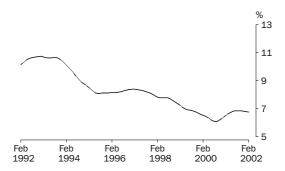

UNEMPLOYED PERSONS

The trend estimate of unemployed persons peaked at 920,600 in September 1993, before falling rapidly to 728,100 in July 1995. The trend then rose slowly, reaching 771,600 in February 1997 before falling to 591,800 in September 2000. It then rose to 675,600 in September 2001, before flattening to stand at 670,200 in February 2002.

UNEMPLOYMENT RATE

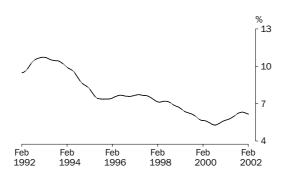

After reaching a high of 10.7% in late 1992, the trend unemployment rate remained steady for twelve months, before falling rapidly to 8.1% in July 1995. The trend then rose slowly until February 1997, before falling to 6.1% in September 2000. The trend then rose until September 2001, before flattening to stand at 6.7% in February 2002.

UNEMPLOYMENT RATE

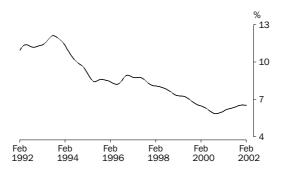

NEW SOUTH WALES

From a peak of 10.7% in January 1993, the trend unemployment rate for New South Wales fell steadily to 7.4% in August 1995. The trend then rose gradually, reaching 7.7% in April 1997, before falling to 5.3% in August 2000. The trend then rose to 6.3% in November 2001. Recently, the trend has fallen, and stood at 6.2% in February 2002.

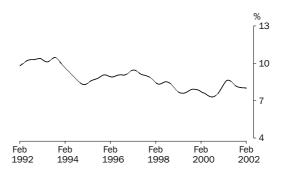

VICTORIA

The trend estimate of the unemployment rate for Victoria decreased sharply from a peak of 12.1% in August 1993 to 8.4% in June 1995. The trend then generally rose to 8.9% in November 1996, before falling to 5.9% in October 2000. Since then the trend rate has risen, flattening recently to stand at 6.5% in February 2002.

QUEENSLAND

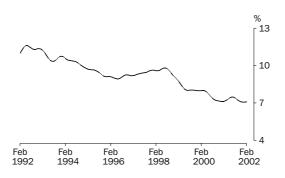

The trend estimate of the unemployment rate for Queensland decreased from a peak of 10.5% in September 1993 to 8.3% in December 1994. The trend the rose to 9.5% in February 1997, before generally falling 7.3% in August 2000. After rising to 8.6% in May 2001, the trend rate has fallen and stood at 8.0% in February 2002.

UNEMPLOYMENT RATE

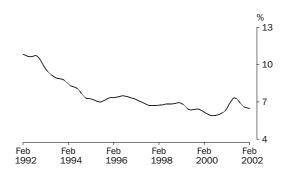

SOUTH AUSTRALIA

The trend estimate of the unemployment rate for South Australia peaked at 11.6% in June 1992. The trend fell steadily to 8.9% in June 1996, before rising slowly to 9.8% in July 1998. Apart from a small increase in early 2001, the trend rate has fallen since July 1998, to stand at 7.1% in February 2002.

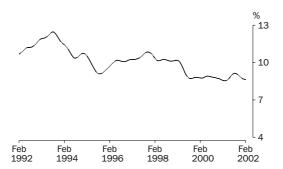

WESTERN AUSTRALIA

The trend estimate of the unemployment rate for Western Australia fell to 7.0% in July 1995, before rising to 7.5% in July 1996. After generally falling to 5.9% in July 2000, the trend rose to 7.3% in June 2001. Recently the trend has fallen to stand at 6.5% in February 2002.

TASMANIA

The trend estimate of the unemployment rate for Tasmania fell from a peak of 12.5% in August 1993 to 9.1% in September 1995. The trend then rose until October 1997, before generally falling to 8.5% in March 2001. After rising to 9.1% in August 2001, the trend then fell and stood at 8.6% in February 2002.

⁽b) Revised due to annual seasonal reanalysis.

INTRODUCTION

1 This publication contains preliminary estimates of the civilian labour force derived from the Labour Force Survey component of the monthly population survey. Estimates for the current month are preliminary and subject to revision. Revised estimates for the current month and more detailed estimates will be published in *Labour Force, Australia* (Cat. no. 6203.0).

CONCEPTS, SOURCES AND METHODS

2 The conceptual framework used in Australia's Labour Force Survey aligns closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling the estimates, are presented in *Labour Statistics: Concepts, Sources and Methods* (Cat. no. 6102.0) which is also available on the ABS website www.abs.gov.au (Statistics—Statistical Concepts Library).

MONTHLY POPULATION SURVEY

- **3** The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about 0.5% of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The information obtained relates to the week before the interview (i.e. the reference week).
- **4** The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. Each year, to deal with operational difficulties involved with collecting and processing the Labour Force Survey around the Christmas and New Year holiday period, interviews for December start four weeks after November interviews start, and January interviews start five weeks after December interviews start. Occasionally, circumstances that present significant operational difficulties for survey collection can result in a change to the normal pattern for the start of interviewing.
- **5** Estimates from the Labour Force Survey are published first in this publication 31 days after the commencement of interviews for that month, with the exception of estimates for each December which are published 38 days after the commencement of interviews.

TELEPHONE INTERVIEWING

- **6** The ABS has introduced the use of telephone interviewing into the Labour Force Survey. Households selected for the Labour Force Survey are interviewed each month for 8 months, with one eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are conducted by telephone (if acceptable to the respondent). Telephone interviewing was phased in for each new sample group from August 1996 to February 1997.
- **7** During the period of implementation, the new method produced different estimates than would have been obtained under the old methodology. The effect peaked in November 1996, when it is estimated that the published estimate of total employment was about 36,000 to 48,000 lower than would have been measured under the old methodology. The effect dissipated over the final months of implementation and was no longer discernible from February 1997. Therefore, the estimates for February 1997 and onwards are directly comparable to estimates for periods prior to August 1996.

SCOPE OF SURVEY

8 The Labour Force Survey includes all persons aged 15 and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

COVERAGE

9 In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are necessarily a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

POPULATION BENCHMARKS

10 Labour Force Survey estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 and over (population benchmarks). From February 1999, labour force estimates have been compiled using benchmarks based on the results of the 1996 Census of Population and Housing. Small revisions were made to many of the historical estimates from January 1995 to January 1999.

REVISION OF SERIES

- **11** From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). For further information, see paragraphs 36 and 37 of the Explanatory Notes to the February 1987 issue of *Labour Force, Australia* (Cat. no. 6203.0).
- **12** From April 2001 the Labour Force Survey has been conducted using a redesigned questionnaire containing additional data items and some minor definitional changes. Core labour force series were revised for the period April 1986 to March 2001 to ensure continuity. For further details, see *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0) and *Information Paper: Questionnaires Used in the Labour Force Survey* (Cat. no. 6232.0).

SURVEY SAMPLE REDESIGN

- **13** The Labour Force Survey sample was last reselected using information collected in the 1996 Census of Population and Housing.
- 14 The bulk of the new sample was phased in over the period September 1997 to April 1998, with one eighth of this portion of the sample being introduced every month. The remainder of the sample (about 15% of the total), which covers less settled areas of Australia and non-private dwellings was rotated in full for New South Wales, Victoria, Tasmania, Northern Territory and Australian Capital Territory in September 1997, and for Queensland, South Australia and Western Australia in October 1997. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the eight months.
- **15** For further details, see *Information Paper: Labour Force Survey Sample Design* (Cat. no. 6269.0).

RELIABILITY OF ESTIMATES

16 Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown on pages 31 and 32. Standard errors of other estimates and other movements may be determined by using information in the Technical Notes in *Labour Force*, *Australia* (Cat. no. 6203.0).

Non sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

SEASONAL ADJUSTMENT AND TREND ESTIMATION

- **17** Seasonally adjusted series are published in Tables 2, 5 and 12 to 17. Seasonal factors are reviewed annually to take account of each additional year's original data. The results of the latest review were used to compile the seasonally adjusted and trend estimates given in this publication. Information about the last annual review of seasonal factors will be published in a feature article in the February 2002 issue of *Labour Force, Australia* (Cat no. 6203.0).
- **18** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment: 6 in 10 monthly movements Unemployment: 8 in 10 monthly movements Unemployment rate: 8 in 10 monthly movements Participation rate: 9 in 10 monthly movements.

- 19 The smoothing of seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series, and creates trend estimates. These trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in tables 3, 6 and 12 to 19.
- **20** While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

SEASONAL ADJUSTMENT AND TREND ESTIMATION continued

- **21** Trend estimates are published for the Northern Territory in table 18 and for the Australian Capital Territory in table 19. Unadjusted series for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month to month revisions. They may be affected by revision resulting from the annual re-analysis of seasonal factors.
- **22** For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends': an Overview* (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 6252 6345.

RELATED PUBLICATIONS

- **23** Users may also wish to refer to *Labour Force, Australia* (Cat. no. 6203.0). This publication contains a detailed list of related publications which are available from ABS Bookshops.
- **24** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

DATA AVAILABLE ON REQUEST

25 As well as the statistics included in this and related publications, the ABS may have other relevant data available. Inquiries should be made to Mark Webb on 02 6252 6525 or to any ABS office.

EFFECTS OF ROUNDING

- **26** Estimates have been rounded and discrepancies may occur between sums of the component items and totals.
- **27** Estimates of movement shown in this publication are obtained by taking the difference of unrounded estimates. The movement estimate is then rounded to one decimal place. Therefore where a discrepancy occurs between the reported movement and the difference of the rounded estimates, the reported movement will be more accurate.

SYMBOLS AND OTHER USAGES

- * subject to sampling variability too high for most practical uses. See the Technical Notes in Cat. no. 6203.0 for more details.

GLOSSARY

Actively looking for work

Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at the Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Attending school

Persons aged 15 to 19 years enrolled at secondary or high school in the reference week.

Attending tertiary educational institution full time

Persons aged 15 to 24 years enrolled full time at a TAFE college, university, or other educational institution in the reference week, except those persons aged 15 to 19 years who were still attending school.

Civilian population aged 15 years and over

All usual residents of Australia aged 15 years and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

Employed

All persons aged 15 years and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were:
 - away from work for less than four weeks up to the end of the reference week: or
 - away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four week period to the end of the reference week; or
 - away from work as a standard work or shift arrangement; or
 - on strike or locked out; or
 - on workers' compensation and expected to return to their job; or
- were employers or own account workers, who had a job, business or farm, but were not at work.

Full-time workers

Employed persons who usually worked 35 hours or more a week (in all jobs) and those who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Labour force

For any group, persons who were employed or unemployed, as defined.

Labour force status

A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Not in the labour force

Persons who were not in the categories employed or unemployed as defined.

Participation rate

For any group, the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.

Part-time workers

Employed persons who usually worked less than 35 hours a week (in all jobs) and either did so during the reference week, or were not at work in the reference week.

Seasonally adjusted series

A time series of estimates with the estimated effects of normal seasonal variation removed. See Explanatory Notes 17 and 18 for more detail.

Trend series

A smoothed seasonally adjusted series of estimates. See Explanatory Notes 19 to 21 for more detail.

Unemployed

Persons aged 15 years and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
 - were available for work in the reference week; or
 - were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.

Unemployed looking for full-time work

Unemployed persons who:

- actively looked for full-time work and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new full-time job.

Unemployed looking for part-time work

Unemployed persons who:

- actively looked for part-time work only and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new part-time job.

Unemployment rate

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

Unemployment to population ratio

For any group, the number of unemployed persons expressed as a percentage of the civilian population in the same group.

STANDARD ERRORS

The estimates in this publication are based on information gained from the occupants of a sample survey of dwellings. Because the entire population is not surveyed, the published estimates are subject to sampling error. The most common way of quantifying such sampling error is to calculate the standard error for the published estimate or statistic.

LEVEL ESTIMATES

To illustrate, let us say the published level estimate for employed persons aged 15 to 19 is 500,000. The calculated standard error in this case is 8,700. The standard error is then used to interpret the level estimate of 500,000. For instance, the standard error of 8,700 indicates that:

- There are approximately two chances in three that the real value falls within the range 491,300 to 508,700 (500,000 + or 8,700)
- There are approximately nineteen chances in twenty that the real value falls within the range 482,600 to 517,400 (500,000 + or 17,400).

The real value in this case is the result we would obtain if we could enumerate the total population.

The following tables show the standard errors for this month's level estimates.

MOVEMENT ESTIMATES

The following example illustrates how to use the standard error to interpret a movement estimate. Let us say that one month the published level estimate for females employed part time in Australia is 1,390,000; the next month the published level estimate is 1,400,000. The calculated standard error for the movement estimate is 13,000. The standard error is then used to interpret the published movement estimate of 10,000. For instance, the standard error of 13,000 indicates that:

- There are approximately two chances in three that the real movement over the two month period falls within the range -3,000 to 23,000 (10,000 + or -13,000)
- There are approximately nineteen chances in twenty that the real movement falls within the range -16,000 to 36,000 (10,000 + or 26,000).

The following tables show the standard errors for this month's movement estimates.

	EMPLOYED			UNEMP	UNEMPLOYED						
	Full time	Part time	Total	Looking for f/t work	Looking for p/t work	Total	Labour force	Not in labour force	Unemp- loyment rate	Partic- ipation rate

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraphs 19 and 20 of Explanatory Notes).

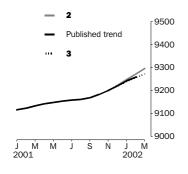

TREND REVISIONS

The examples in the tables below show four illustrative scenarios and the consequent revisions to previous trend estimates of employment and unemployment rate.

- **1** The March seasonally adjusted estimate is the same as the February estimate.
- **2** The March seasonally adjusted estimate is higher than the February estimate by:
 - +0.29% for employment
 - +1.84% for the unemployment rate
- **3** The March seasonally adjusted estimate is lower than the February estimate by:
 - -0.29% for employment
 - -1.84% for the unemployment rate
- **4** The March seasonally adjusted estimate results in a revised February trend estimate which is identical to the new March trend estimate.

The percentage changes of 0.29% and 1.84% were chosen because they represent the average absolute monthly percentage changes in employment and the unemployment rate respectively.

EMPLOYMENT ('000)

		1	2	3	4

FOR MORE INFORMATION...

INTERNET www.abs.gov.au the ABS web site is the best place to

start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a

statistical profile.

LIBRARY A range of ABS publications is available from public and

tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.

CPI INFOLINE For current and historical Consumer Price Index data,

call 1902 981 074 (call cost 77c per minute).

DIAL-A-STATISTIC For the latest figures for National Accounts, Balance of

Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

INFORMATION SERVICE

Data which have been published and can be provided within five minutes are free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user-pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
